

SUNGLO FEEDS

Show Pig Nutrition

Our "Research Based... Show Ring Confirmed" feeds have been developed to meet individual animal needs.

Backed by the largest swine nutritional staff and research program in North America.

SUNGLO FEEDS

▶ Maximize growth rate for market barrows or gilts:

- Feed 5.75 lb S-501 per day.
- + Feed 2-4 oz Sumo per day.
- + Feed 4 oz Explode per day last 3-4 weeks.

▶ Reduce body fat and maintain growth rate:

- Feed 3 lb S-101 or S-501 per day.
- + Feed 1 lb Final Control per day.
- + Feed 8 oz Full Tank per day.

▶ Enhanced muscle shape and aggressive toning

- Full feed S-811 or S-711 last 2-4 weeks.
- + Add 1 lb Final Control per day for additional toning.

▶ Aggressive holding pattern & maintain fresh look:

- Feed 2 lb S-101, S-501 or S-201 per day.
- + Feed 2 lb Final Control per day.
- + Feed 1-2 lb Full Tank per day.
- + Feed 4 oz SUMO per day.

▶ Enhance body and condition:

- Feed 4 lb S-201 or S-501 per day.
- + Feed 1 lb Full Tank per day.
- + Add 4-6 oz SUMO or 1-4 oz LiguaFat per day.
- + Feed 3-5 oz Bloom & Fiber per day.

Inhale may be added to any of the above recommendations when additional intake is desired.

Sunglo Show products may be ordered with a variety of medications and dewormers.

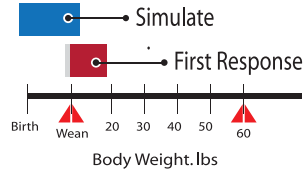

First digit indicate: Sunglo FEED SERIES Last 2 digits indicate: MEDICATION options

8 00	[00] Mecadox
8 01	[01] Tylan
8 03	[03] Denagard + Aureomycin
8 04	[04] Lincomycin
8 05	[05] Safeguard
8 11	[11] Paylean + Tylan

Non-floorstocked medications available in 2 ton minimum.

For more product information reference the Sunglo Specialty Products brochure or visit www.sunglofeeds.com

The prestarter nutrition phase is the first step towards generating success. Give your pig the advantages of proper nutrition during this important stage of life.

Simulate

Pig Milk Replacer

- Designed to supply complete supplemental nutrition to very young pigs when milk supply is inadequate.
- Contains 26% protein, 18% fat
- Mix with water to make a solution similar to sow's milk.
- SIMULATE is non medicated and can be used at any stage with no withdrawal.

First Response

A specialized ultra-small pellet designed to smooth the transition from sow's milk to dry feed.

- Highly palatable to encourage feed intake.
- Contains plasma proteins, lactose, and milk proteins at levels needed by young pigs immediately post-weaning.
- Can also be used as a creep feed before weaning.
- **FIRST RESPONSE** needs to be fed for a minimum of 5 days after weaning.
- 20% Protein, 1.6% Lysine, 9.0% Fat

For Even Better Starts and Performance!

Dry Mixture:

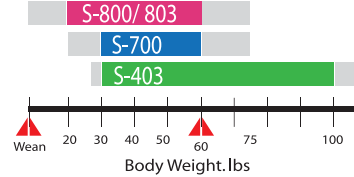

First Response

Simulate

2:1 ratio

- For all pigs weaned at less than 17 days of age.
- For the "lighter end" pigs weaned at normal time.

You have a quality pig that has been nurtured through the prestarter phase. Keep that momentum going during the starter phase with these research based starter feeds.

800 Series

Pelleted Complete Starter Feed

- The **INDUSTRY LEADER** to "maximize bloom and sale readiness".
- Second stage feed that maximizes bloom on weaned pigs.
- Best if used after **FIRST RESPONSE** and until optimum bloom is obtained.
- Complete 1/8" mini-pellet
- 19% Protein, 1.4% Lysine, 5.5% Fat
- We recommend S-803 with CTC/Denagard for broad spectrum control.

700 Series

Pelleted Complete Starter Feed

- A product series very similar to the 800 series above except designed for genetics that need less energy to maintain proper condition.
- Can be used as a late starter feed after feeding the 800 series.
- 19% Protein, 1.4% Lysine, 3.5% Fat

400 Series

Pelleted Complete Starter Feed

- Third stage starter designed to continue growth and development while maintaining bloom.
- Complete 1/8" mini-pellet with CTC/Denagard for broad spectrum control.
- S-403 is cost effective for use after feeding the 800 series to maintain bloom and maintain a high percent sellable pigs.
- Typically used from 30 lbs to 100 lbs.
- 18% Protein, 1.3% Lysine, 5.5% Fat
- We also suggest S-403 as a very effective receiver feed due to its palatability and combination of medications.

Most feeders will choose one of these as their primary feed. Tailored lysine and protein levels for specific genetics, sex and optimum show condition objectives during the developer phase.

100 Series Pelleted Complete Feed

- 20% protein, 1.2% lysine, 5.5% fat.
- S-101 is a complete show feed for maximum growth rate and expression of full genetic potential.
- Utilize this feed in the stage of growth where you want to continue with muscle mass growth.

500 Series Pelleted Complete Feed

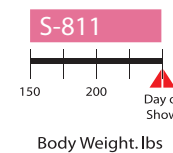

- Our **MOST POPULAR** finisher diet.
- 18% protein, 1.0% lysine, 5.5% fat
- Lower protein option that still delivers performance with a soft fresh look while keeping showing muscle shape.
- S-505 contains Fenbendazole (Safeguard®) at 32.66 mg/lb to deworm show pigs.
- Feed 12.5 lb of S-505 per 100 lb of body wt. (normally 3-4 days).

200 Series Pelleted Complete Feed

- 16% protein, 0.9% lysine, 5.5% fat.
- Feed of choice for tighter constructed, extreme muscled hogs.
- Offers a lysine and fat combination to moderate muscle and increase flesh or condition.
- Utilize later in feeding program. Many use on breeding gilts to encourage rib development.

811 Series Pelleted Complete Feed

A combination of the superior nutrition in the 800 series with 9 grams of Paylean to maximize bloom and show readiness in the last 14-30 days prior to the show.
